“THIS IS A DRAWING/SKETCH OF WHAT IS COMMONLY CALLED THE “ANTE-CHAMBER” OF THE “KING'S CHAMBER” OF THE GREAT PYRAMID “THE ONLY THING THAT MAKES THIS AN “ANTE-CHAMBER” IS THAT IT IS AN ANTI-COLLAPSING CHAMBER. WHEN CORRECTLY ASSESSED AS A MODULAR CASING TOOL SYSTEM ONE CAN EASILY SEE THE WATER USE PURPOSES. IT IS CRITICAL TO UNDERSTAND HOW THIS TOOL SET MAY HAVE WORKED, BECAUSE WE WILL SEE A LARGE 120 TON HYDRAULIC LIFT MECHANISM THAT IS NEARLY IDENTICAL FOR LIFTING THE VERY LARGE STONES. ONE SHOULD KEEP IN MIND THAT THE TYPICAL STONE SIZE ABOVE THIS CENTRAL LIFT SYSTEM IS ONLY ABOUT 2.4 FEET CUBED OR LESS. THIS WOULD EASILY BE LIFTED AND MOVED WITHIN THE CONFINES OF THIS VERTICAL LIFT SYSTEM. SO IN ESSENCE THIS IS A HYDRAULIC LIFT OR ELEVATOR SECTION.”

SPECIAL THANKS TO MRS. TANYA TAYLOR AND THE DRAFTING CLASS AT WASHINGTON-HOLMES TECHNICAL CENTER FOR THIS DRAWING.
