### THE GIZA PLATEAU AERIAL

Many people will be drawn to the pyramids, but allow me to direct you to other more important items. You will be able to look at the pyramids later. As you study this drawing please begin at the lower right working out. I will identify the items of interest. You will be able to do your own Internet search using GoogleEarth aerials to identify all the components I list herein. This identification will help you to discover many things you may not be able to identify on your own.

1. Lower right (blue) is standing water indicating a high water table at Giza. Indications are the water here is 61 feet above sea level.
2. North of the standing water is a very, very thick wall (thicker and larger than the Sphinx), indicating it is a levy wall. Base height is 70 feet above sea level. The wall/levy is over 20 feet tall, designed for holding back 16 or more feet of water.
3. Northeast of the standing water we see both an ABOVE ground cemetery evidencing a high water table, and large trees. One must wonder why above ground graves/cemetery in the desert sand? Simple! To avoid the high water table. Note: the cemetery and trees are at approximately the same elevation as the Sphinx.
4. Look now at our little Sphinx. The structure is only 20+feet wide and 65 feet tall. Notice based on the standing water today (Year 2007) the water table is only 9 feet below the Sphinx! Look again at the standing water and the elevation of each, considering this is a sandy desert. Permeation of water through the soil makes the water table fairly uniform in areas near the standing water. NOTICE: When the water table was high enough to employ the levy wall then the water around the Sphinx would be at shoulder high on the structure thus creating the body erosion, cavity wear, and erosion patterns inside the hole it sits in.
5. Notice the Pyramids. Alignments, construction, destruction, demise, purpose is accurately described for the first time ever in the book, *The Solomon Series: Great Pyramid Mystery Resolved* found at [www.SolomonSeries.com](http://www.SolomonSeries.com)
6. As we notice from accurate surveys of the structures the Great Pyramid has a hole (sub-terranean chamber) at 98 feet or more beneath it. This being the case when the Sphinx cavity was flooded with water as described, then the subterranean chamber of the Pyramid was flooded.

7. **THINK!** If a people group were to build the largest rock pile in the world (Great Pyramid) but wanted a hole under it when they finished, then which would they do first, Dig the hole, or pile the rock??? If we expect them to be sensible, then we would expect them to dig the hole first! Therefore to solve the building reason and method of the pyramid the first thing to do is to figure out the reason for the hole! As we look at the hole it would be flooded/submerged when the levy, Sphinx and valleys were full of water. Meanwhile, why dig the hole? Go to [www.SolomonSeries.com](http://www.SolomonSeries.com) to learn more.
8. Note: It is common knowledge that many fine rock formations come from mineral deposits from the "settings" of waters. Any self-respecting geologist would know to study the water table for erosion issues when considering a rock formation of this kind. Since the Arabs who stripped the covering rock off the Great Pyramid noted water erosion only to about the half-way up mark then one would think water came from somewhere, emerged out the side, washed down the side, and further filled to cavity around the Sphinx, since the base of the Sphinx is approximately 115 feet lower than the base of the Great Pyramid, the run off from the Pyramid (Pump??) would wash the edges of the Sphinx cavity, thus raising the local water table and flooding the plateau.
9. Isn't it amazing what a person can do with GoogleEarth and an open mind??? The pyramid mystery is solved, and the hoax of a geologist/archaeologist exposed! More power to the people! Yes, we expose lots of academic fraud at [www.SolomonSeries.com](http://www.SolomonSeries.com). It is like "Myth Busters" for ancient myth, legend and lore.

**Cemetery & Trees**

**Above Ground Graves**

**Levy Wall**

**Standing Water**
